

# NATIONAL INSTITUTES OF HEALTH

UW-MADISON: RANKED #8 NATIONALLY WITH \$1.52 BILLION IN ANNUAL RESEARCH EXPENDITURES

As the nation’s medical research agency, the National Institutes of Health (NIH) funds UW-Madison research focused on discoveries that improve health and save lives.

**\$478.8 million**

**NIH research awards to UW-Madison in 2022-23**

**\$952.4 million**

**federal research awards to UW-Madison in 2022-23**

## NIH FUNDING IN ACTION AT UW-MADISON

### Investigating the neurobiology of Alzheimer’s disease and related dementias

#### *Clarity in Alzheimer’s Disease and Related Dementias Research Through Imaging (CLARiTI)*

UW-Madison is leading a nationwide research initiative to investigate the neurobiology of Alzheimer’s disease and related dementias. The five-year study will provide state-of-the-art imaging and blood-based biomarkers for researchers around the world to study and advance the field of Alzheimer’s and related dementias. The work is also designed to shed light on mixed dementia, where more than one neurological disease is contributing to dementia. With nearly 7 million Americans diagnosed with Alzheimer’s disease and related dementias – a number that continues to grow – the study aims to help researchers better understand the full range of problems in the brain that may cause dementia.

## WHY UNIVERSITY RESEARCH MATTERS

NIH-supported research at UW-Madison seeks to enhance life and reduce illness and disability. NIH funding builds the research foundation that drives discovery, prepares the next generation of health experts, and has led to breakthroughs and new treatments helping people live longer, healthier lives.
